QmodemPro

PROFESSIONAL COMMUNICATIONS SOFTWARE

FOR WINDOWS

No other communications software does Windows like QmodemPro.

All the power and performance of Mustang Software's QmodemPro communications software is now ready to plug into the Windows environment.

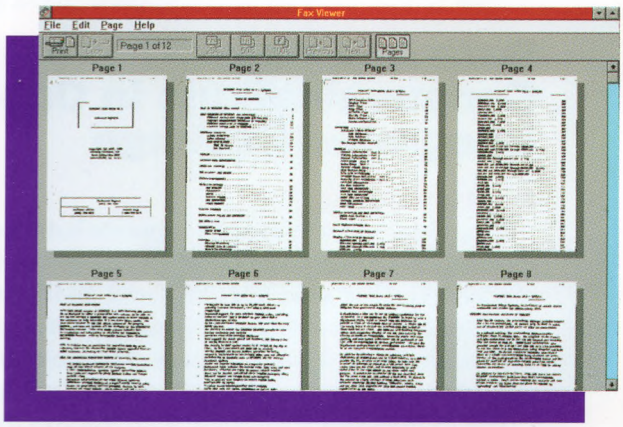
QmodemPro for Windows v1 is the first and only communications software that supports both data and fax communications in one easy-to-use package. And it offers the widest range of file transfer options, terminal emulations and user-support features. Two new reasons why more than 80,000 current QmodemPro users will be able to communicate better than ever.

With QmodemPro for Windows v1, you can make the Windows multitasking environment work for you. Use it to download files or capture data in the background while you work in a word processor or spreadsheet application. Qmodem includes a built-in .GIF viewer that lets you view .GIF graphics files and even zoom a .GIF or .BMP file, or mark and copy portions of the picture to the Windows clipboard. And QmodemPro for Windows is the first software to support RIPscrip, the defacto graphics standard for BBS systems worldwide.

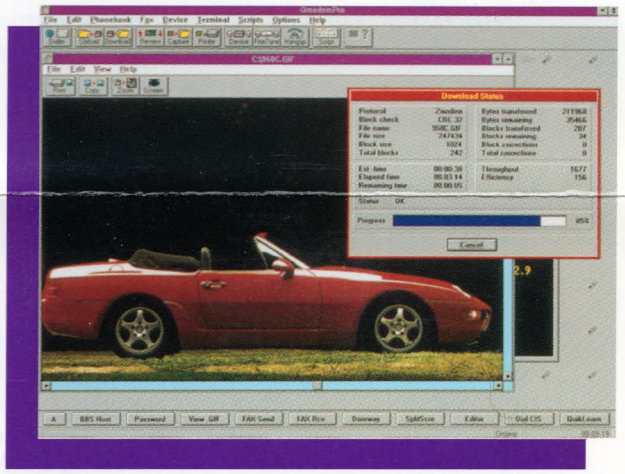
QmodemPro also supports sound cards, so you can assign Windows Wave soundfiles to specific events in your communications session. This means you can have a WAV file played when you connect to a BBS, when your download is complete, and during other events like connect, dialing, file transfer success and failure. QmodemPro is that powerful. And that versatile.

We're talking a new language.

QmodemPro for Windows contains a brand new Script Language for QmodemPro (SLIQ) that gives you unparalleled power, speed and flexibility. The host mode even allows you to create a mini-BBS. Based on the BASIC language structure, it adds extensions for the Windows communications environment and includes a Quicklearn feature for creating scripts without learning the language. A compiler is included for compiling fast, secure scripts. We've also included a powerful script debugger and full editor.



QmodemPro's FAX viewer lets you preview multiple FAX pages and make your choice of pages for expansion, viewing and printing.



What you see is what you get...live .GIF file viewing during download shows you the graphic as the file is being received.

QmodemPro provides more than 30 terminal emulations including the popular RIPscrip graphics used by thousands of bulletin board systems.

QmodemPro

PROFESSIONAL COMMUNICATIONS SOFTWARE

Data And Fax Communications In One Integrated Package

Fax In, Fax Out.

QmodemPro for Windows supports both sending and receiving FAX documents with any Class 1 or Class 2 FAX modem. You can send text, .PCX and .BMP graphics, and even include the cover page of your choice. Received FAXes are selected from the viewer as thumbnail sketches, and can easily be expanded, viewed and printed.

File transfers are made easy with features like live .GIF file viewing during download and drag-and-drop of files from Windows File Manager to the upload window. Information can be reviewed in the scrollback buffer at the click of a button. The screen behind the terminal window can be customized with your favorite pattern or .BMP file.

Terminal emulations include the new RIPscrip graphics emulation for connection to thousands of BBS systems offering graphics and full mouse support online. The terminal window includes a button bar for fast access to menu commands, including the phonebook, upload, download and more. Up to 40 programmable macro keys are also available for sending text, launching scripts, and many other program functions.

Each dialing directory entry tracks up to 5 numbers and a default device, emulation, protocol, user ID, password, script, icon, macros and memo field. Groups of entries can be saved and dialed either continuously or until a single contact is made. The directory can be viewed as a list, a group of icons or a combined icon/list. A simple double click is all you need to do to dial, connect and get online.

Your future is here today.

QmodemPro for Windows v1 brings you to the leading edge of communications software and lets you enjoy the increasing versatility of the Windows environment. Plug into your future of communications. Call Mustang Software at 800-999-9619 to order now.

Graphics Support

Display of .GIF files while downloading. Full support for RIPscrip graphics when connected to any RIP compatible host or BBS system.

FAX/Support

Send and receive FAX features require a modem with Class 1 or Class 2 FAX capabilities.

Terminal Emulations

ADDS VP60, ADM 3A, ANSI, Avatar, DG 100, DG 200, DG 210, Doorway, Hazeltine 1500, Heath 19, IBM 3101, RIPscrip, TTY, TVI910, TVI912, TVI920, TVI922, TVI925, TVI950, TVI955, Vidtex, VT52, VT100, VT102, VT220, VT320, Wyse 30, Wyse 60, Wyse 75, Wyse 85, Wyse 100, Wyse 185.

File Transfer Protocols

ASCII, Xmodem, Xmodem/CRC, 1K Xmodem, 1K Xmodem/G, Ymodem (batch), Ymodem/G (batch), Zmodem (batch), Kermit, CIS B+

Connectivity

Full support for asynchronous connection to other PCs including IBM, Macintosh, minicomputers, mainframes and online information providers like CompuServe and others.

System Requirements

Computer: An IBM, PS/2 or 100% compatible with 80386 or 80486 or greater CPU, 4 megabytes RAM, VGA or higher graphics adaptor and monitor, five megabytes of available hard disk storage.

Operating Systems: Microsoft Windows v3.1 or higher, standard or enhanced modes.

Mouse: Any mouse driver compatible with Microsoft Windows.

Ports: Windows COM1-COM4, Digiboard using Digiboard comm drivers.

Network Modems: LAN modems via INT 14, NASI/NCSI using appropriate Windows comm drivers.

Modem: Any internal or external modem. An external modem requires an internal serial port and cable, while an internal modem requires an expansion slot inside your PC.
